## **NuTel Technologies Launches Cellular Gateway Solutions To Benefit Local Businesses**

*Partnership With ITS Telecom To Reduce Cellular Phone Costs By 50%*

ST. GEORGE, UT – December 15, 2006 - NuTel Technologies, Inc., a leader in business communications, announced today that it has launched Cellular Gateway solutions to benefit local businesses. The company recently formed a strategic partnership with ITS Telecom US to deliver an innovative technology that has the ability to reduce an organization's cellular phone costs by 30% or more annually.

ITS Telecom's Cellular Gateway solutions integrate mobile phones to the company's traditional (PBX) phone system in a highly economical manner. When the mobile user places a call to the Cellular Gateway they are connected to a PBX dial tone. The mobile user has several options such as dialing an internal extension or making a long distance or toll free call. For outbound calls from the office to the mobile user, the cellular gateway converts that desk phone into a cell phone. All of this activity is viewed by the cell network as mobile to mobile activity with zero paid minutes used. If an outside call is made, the Cellular Gateway bridges the mobile phone to the PBX, then it routes the call to the specific party, and the company is charged normal landline rates. As a result, the Cellular Gateway reduces both long distance charges and paid minutes used by company cell phones. Companies now have the option of immediately reducing the paid minutes in their cell plans. Currently, ITS

Telecom's Cellular Gateway supports the GSM network (Cingular and T-Mobile) with the CDMA (Verizon and Sprint) version due out second quarter of 2007.

"The Cellular Gateway has the potential of reducing corporate cell phone bills by a minimum of 30%," said Fred Palacios, director of sales for ITS Telecom U.S. "The gateway is actually very simple. Basically, all calls between the office and mobile users are routed through the gateway and recognized as mobile-to-mobile activity by the carrier with no paid minutes used. NuTel Technologies' customers that implement any of our Cellular Gateway products will reap immediate benefits by dramatically improving their bottom line. We're excited about this new relationship with one of the leading business communications providers in the industry."

"We're constantly reviewing, analyzing, and testing new technology to help our customers achieve their business goals," stated Robert Hibbs, president of NuTel Technologies.

"Identifying that one technology that can significantly impact an organization is exciting. During this process, we have two objectives in mind – to find technology that increases profitability and give the companies we serve a competitive advantage. We believe that ITS Telecom's Cellular Gateway is a valuable investment for many of our customers."

### **ABOUT NUTEL TECHNOLOGIES, INC.**

NuTel Technologies is Southern Utah's most prominent business telephone and data communications company. Locally owned and operated, Robert Hibbs, CEO and founder of NuTel Technologies, had a vision of an organization that would provide communication services to our local businesses without limits.
