CAPABILITY STATEMENT

NuTel Networks

Enterprise Communications & Managed Technology Solutions That Keep Your Business Connected.

Founded	1990
Primary office	St. George, Utah
Core role	Single point of contact for voice, data, cabling, support, service, repairs, and technical advice.
Best-fit buyers	Government, healthcare, education, professional services, construction, hospitality, manufacturing, and multi-location organizations.

Core Capabilities

Unified communications Business phone systems, hosted voice, VoIP, cloud PBX, endpoint devices, training, and support.	**Network infrastructure** LAN/WAN, switching, routing, Wi-Fi, fiber, SD-WAN planning, network assessments, internet dependencies, and lifecycle planning.
Structured cabling Copper, fiber, office buildouts, data closets, new construction, renovations, labeling, documentation, and multi-site cabling standards.	**IP camera security** IP camera systems, video recording, remote viewing, and supporting cabling, switching, and network coordination.
Managed support Monitoring readiness, help desk coordination, endpoint support, patch planning, vendor coordination, continuity planning, and lifecycle governance.	**Government and multi-location** Government account support, national account programs, standardized implementation, centralized support, rollout sequencing, and lifecycle governance.

Differentiators

- 35+ years supporting communications and business technology environments.
- Voice and data expertise with one accountable support path.
- Factory-trained technical team and practical user support orientation.
- Multi-location capability for standardization, rollout planning, and centralized support.
- Technology planning built around reliability, serviceability, uptime, and operational efficiency.

Public-Sector Fit

- Service categories are organized for procurement review and project scoping.
- Support model can align with government, education, healthcare, and institutional buying processes.
- Distributed office programs can include standards for phones, cabling, network equipment, support paths, and lifecycle governance.
