

FOR IMMEDIATE RELEASE:

September 22, 2009

NuTel Technologies, Utah's leading telecommunications solution provider, is pleased to announce that Eric Hibbs has just become a BICSI (www.bicsi.org) certified Registered Communications Distribution Designer, or RCDD. This certification is a major accomplishment within the telecommunications industry worldwide, and requires many hours of study and a final exam.

With less than 10,000 RCDD's worldwide, the need for the certification is growing rapidly. Many private and all government contracts we do require that a RCDD is on staff and supervising the work. Often we are called upon to assist in voice/data/video design as experts, and with this certification it underscores NuTel's level of professionalism and expertise.

The RCDD certification is globally recognized within the telecommunications industry, as a designation of the exceptional qualifications and expertise of the individual, in the design, integration and implementation of telecommunications systems and their related infrastructure components. The RCDD designation is becoming ever more recognized—and required—by many private and state organizations.

Eric Hibbs, VP—Operations, has been with NuTel Technologies since we began in May of 1990. Now in our 20th year of serving Utah and surrounding areas, we have even more to offer the community.

NuTel's direction is clear; to provide the very best products, service and consultation. Our future is bright and we're on track for another great 20 years!
